EXPERIENCE

Unify AI – New York, NY

Nov 2025 – Present

Product Operations Manager

- Owned evals for our LLM product: designed a 143-question labeled dataset spanning core product capabilities, with ground truth generated via Claude Code using our codebase and validated by the engineers who wrote it
- Shipped an AI agent that resolved 50%+ of inbound support tickets and routed the rest to the right owner; continuously iterated and backtested response variations to improve its accuracy and when it escalated to a human
- Owned the customer operations function across 400+ accounts, personally handling our highest-ARR customers and serving as the primary feedback loop that surfaced recurring customer pain points and drove them to resolution
- Architected the knowledge infrastructure powering multiple AI agents, consolidating 800+ scattered docs into a single source of truth that stayed current with every release and cutting how often agents gave outdated answers
- Designed and deployed a nightly Claude Code workflow that ranked open tickets by ARR, SLA risk, and severity, surfacing the highest-impact bugs so on-call engineers could resolve them faster
- Drove roadmap prioritization with Product and Engineering, turning fragmented ticket data into weekly leadership readouts that shaped what we built

Scale AI – New York, NY

May 2024 – Nov 2025

Strategic Projects Lead

- Owned data strategy and operations for LLM training and evaluation end-to-end: wrote the task guidelines and success criteria, then led webinars and calibrated 100+ trainers and QMs who drove labelers across 30+ locales
- Built and scaled human data pipelines 0→1 into ~\$180M in combined ARR, including a multilingual queue at ~\$104M (~70% of GenAI consumption) and a generalist queue that ramped to 5,000+ tasks in 5 weeks
- Built evaluation frameworks and quality systems (GPT-4o and internal LLMs) that flagged errors at 94% precision, cut reviewer effort 75%, and held data to the bar required for training
- Partnered with research and product to build the tooling behind our pipelines, per-locale quality dashboards and performance tracking that gave the team real-time visibility into throughput and quality

Yuva AI – New York, NY

Jan 2024 – May 2024

Computer Vision AI Data Engineer, Internship

- Designed novel datasets (bounding box, segmentation, keypoint, depth) on a physics-based simulation platform for Fortune 500 healthcare and media clients
- Helped build the evaluation system scoring synthetic-data quality, raising accuracy 20% across client projects

PROJECTS

Dibs! – BU Spark!

May 2023 – May 2024

Founder & Product Manager

- Founded and shipped a campus reuse marketplace (0→1); owned the full product lifecycle from ideation and design through launch as Product Manager and Lead Developer
- Ran product discovery (100+ user interviews, 13 beta tests, and A/B experiments) to prioritize features and refine design
- Led a 5-person team through 40+ agile sprints from prototype to a live beta with real student users

SKILLS

AI / LLMs RLHF & Preference Data, LLM Evaluation, Rubric Design, AI Agents, Data Quality

Data & Operations SQL, Snowflake, Redash, Tableau, Salesforce, Linear

Programming Python, TypeScript, JavaScript

Languages English (native), Arabic (native), French (conversational)

Interests Experiential Design, Oil Painting, Vintage Sourcing, Tennis

EDUCATION

Boston University – B.A. Computer Science, Minor in Visual Arts

- Women in Computer Science (E-board Member)
